

At Dragon, we believe firmly in continuous improvement across all aspects of our business to ensure that we remain a safe and competitive business and employer in the energy industry. Energy efficiency has always been important to us and with the acceleration of the energy transition in the UK, underpinned by Wales' net zero ambitions and recent global energy security concerns, we are accelerating the renewable power element of our energy strategy. Our strategy looks across the business to reduce our carbon footprint over several years by harnessing both technology and human behaviours. The recently approved planning consent for our solar project is a great example of both decarbonisation and energy security, so we are now considering the addition of wind turbines to create an energy park that maximises our renewable power generation. If successful, this would have a significant impact on our carbon footprint and make us a more competitive business for the future.

Our plans are at an early stage, but we are investigating the feasibility for installing up to three wind turbines, which would be placed in line with the existing Wear Point wind turbines at the Valero Pembrokeshire Oil Terminal. Harnessing wind could provide up to 39% of our power demands, which when combined with our solar development, would provide us with enough renewable electricity to meet up to 47% of our needs.

Community Consultation Events

We will be undertaking, along with our specialist wind advisor Infinergy Ltd, the first round of public consultation events on **11th and 12th May 2022**.

Walk-in public exhibition

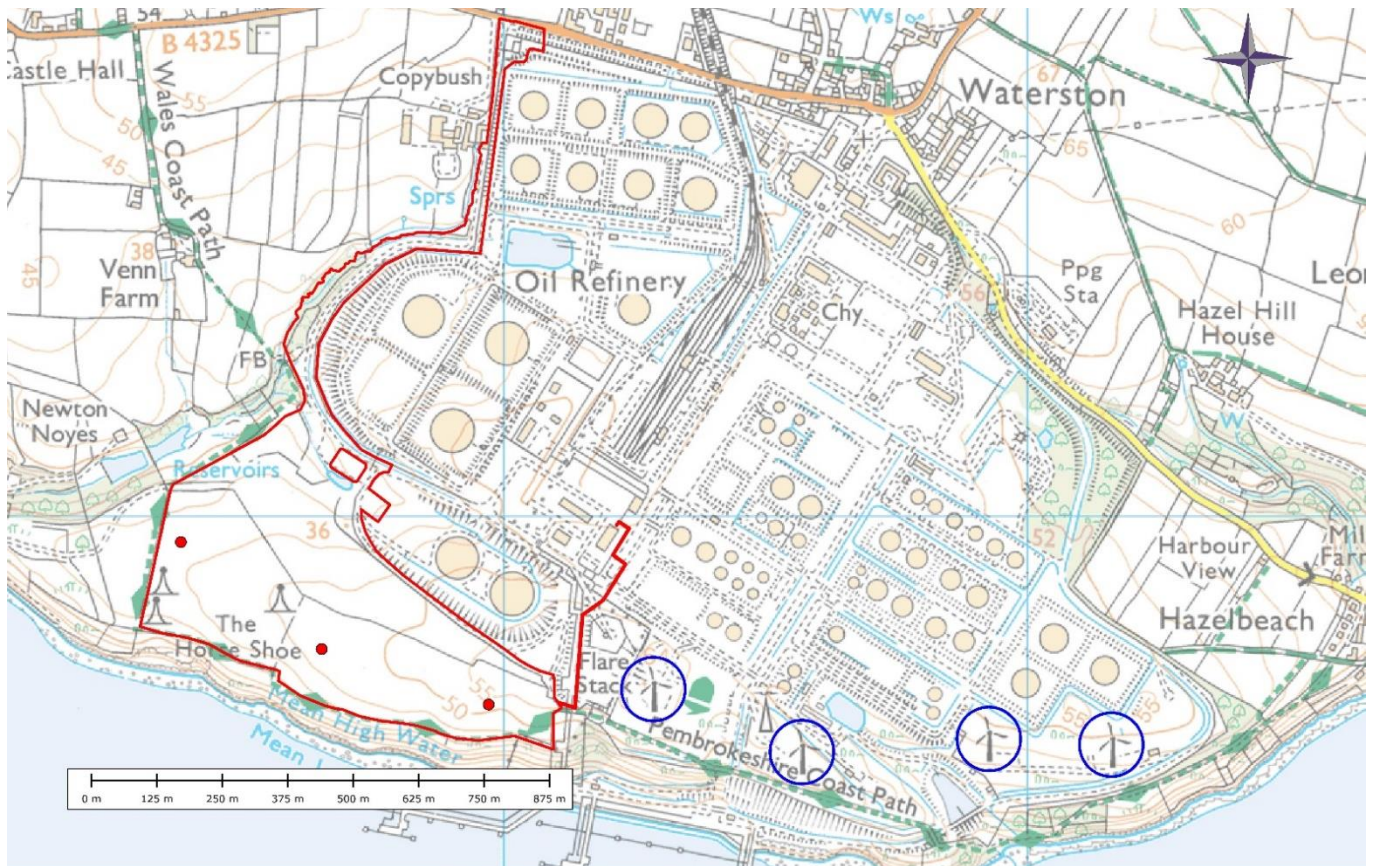

On **Wednesday 11th May from 4.00 – 7.30pm**, at **Newton Hall, Main Road, Waterston, SA73 1DR**, we are holding a public exhibition where initial project information will be displayed. Members of the project team will be on hand to discuss the proposals and answer questions. If you have COVID-19, have been in contact with someone who currently has COVID-19, have any COVID-19 symptoms, or feel unwell, please do not attend this event. Hand sanitiser will be available, and the environment will be ventilated.

Online event

In order to reach as many members of the local community as possible, and mindful of ongoing Covid-19 concerns, an online event will be held on **Thursday 12th May from 5.30-6.30pm**. The project team will explain the proposals and answer questions using digital platform Zoom. Please register for this session via the project website: www.dragonenergypark.co.uk. You will be emailed a link to the event. A recording of the session will be uploaded onto the website. We look forward to hearing from you.

Key Features

- The emerging proposal is for up to 3 wind turbines of up to 149.9m /491.8ft when the blade is in a vertical position
- Each turbine would have an installed capacity of up to 4.8 megawatts (MW)
- The wind turbines would produce enough electricity to meet up to 39% of Dragon's on-site demand per year. Combined with the solar development, approximately 47% per year
- A range of environmental studies are underway to inform the planning application, which we plan to submit this autumn to Planning and Environment Decisions Wales, part of the Welsh Government
- Access would be taken from West Perimeter Road
- As a first step, an Environmental Impact Assessment Scoping Request will shortly be submitted to the Welsh Government, with Pembrokeshire County Council as key consultees
- The proposed turbine locations are indicated with red dots. The existing Wear Point Wind Farm turbines are indicated with blue circles

Get in touch

We look forward to welcoming you to either of the public consultation events. If you are not able to attend but would like to find out more and give your feedback, please visit our website, call us, send us an email, or write to the Freepost address.

There will be further opportunities to hear from us as the development progresses. Alternatively, please get in touch in one of the following ways:
